**ISP-11**

**THE WAVE BREAKER!**

**MORE THAN 18.5 MILES ON ONE  
BATTERY CHARGE!**

**\$22,595.00**

Includes Gate Auto Lock Option  
**Delivered**

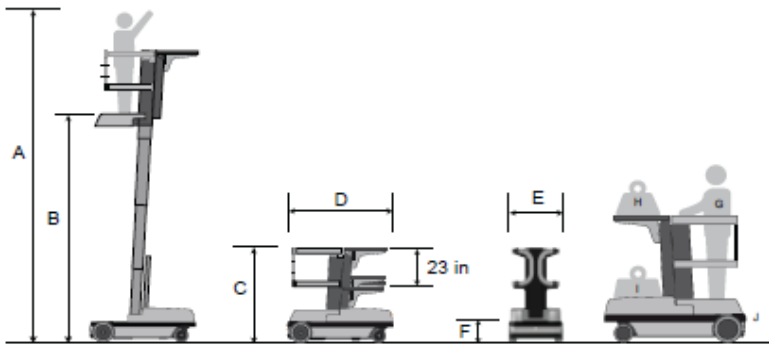

The ISP-11 features an anchoring point on the back of the chassis where a hook can be fastened to a tow trailer carrying up to 440 lbs. Loading platform at maximum height corresponds to the column height. The column, in special extruded aluminum alloy, is completely without any need of maintenance. Acceleration of forward/backward movement is proportional and positioned near the basket raising and lowering button, to enable these movements even during forward movement. All systems are operable without having to move the hand from the accelerator, for maximum operator comfort. Safety position with double sensor pedal and left hand sensor allow activation of the functions. These safety devices serve to guarantee the stable position of the operator, with both hands on the controls before these become activated. Material tray is electrically operated by a button in the upper control box.
